

Approaches to moving towards a 'Green future'

Chanda Saikia
Senior Sustainability Specialist, IBM

Tamás Kubicsek
Sustainability Evangelist, IBM

IBM's longstanding commitment to environmental stewardship

1965 CEO Thomas Watson Jr. Commits IBM to responsible corporate citizenship	1988 – First goal for Nonhazardous waste recycling – Goal for PFC emissions reductions	1990 Begins annual corporate environmental reporting	1995 Goal for use of recycled plastic resins in products	2001 First purchase of contracted renewable energy for use in operations	2007 Published position on climate change, calling it a “serious concern that warrants meaningful action on a global basis”	2019 Founding member of the <i>Climate Leadership Council</i> supporting bipartisan plan for carbon tax and dividend	Jan. 2022 IBM introduces Sustainability Software and Consulting; acquires Envizi to help clients operationalize sustainability goals	
1971 IBM issues first Corporate environmental policy	1975 First goal for energy conservation	1989 Goal for CFC elimination	1994 IBM advances voluntary reporting through the Public Environmental Reporting Initiative (PERI)	2000 First goals for – CO ₂ reduction – Water conservation – Reuse & recycle end-of-life products	2003 IBM becomes the first company to recover and recycle one billion pounds of IT and e-waste	2010 Require suppliers to implement an environmental management system, set goals and publicly disclose performance	2021 IBM Commits To Net Zero Greenhouse Gas Emissions By 2030	Feb. 2022 IBM launches Sustainability Accelerator to scale organizations supporting communities vulnerable to climate change

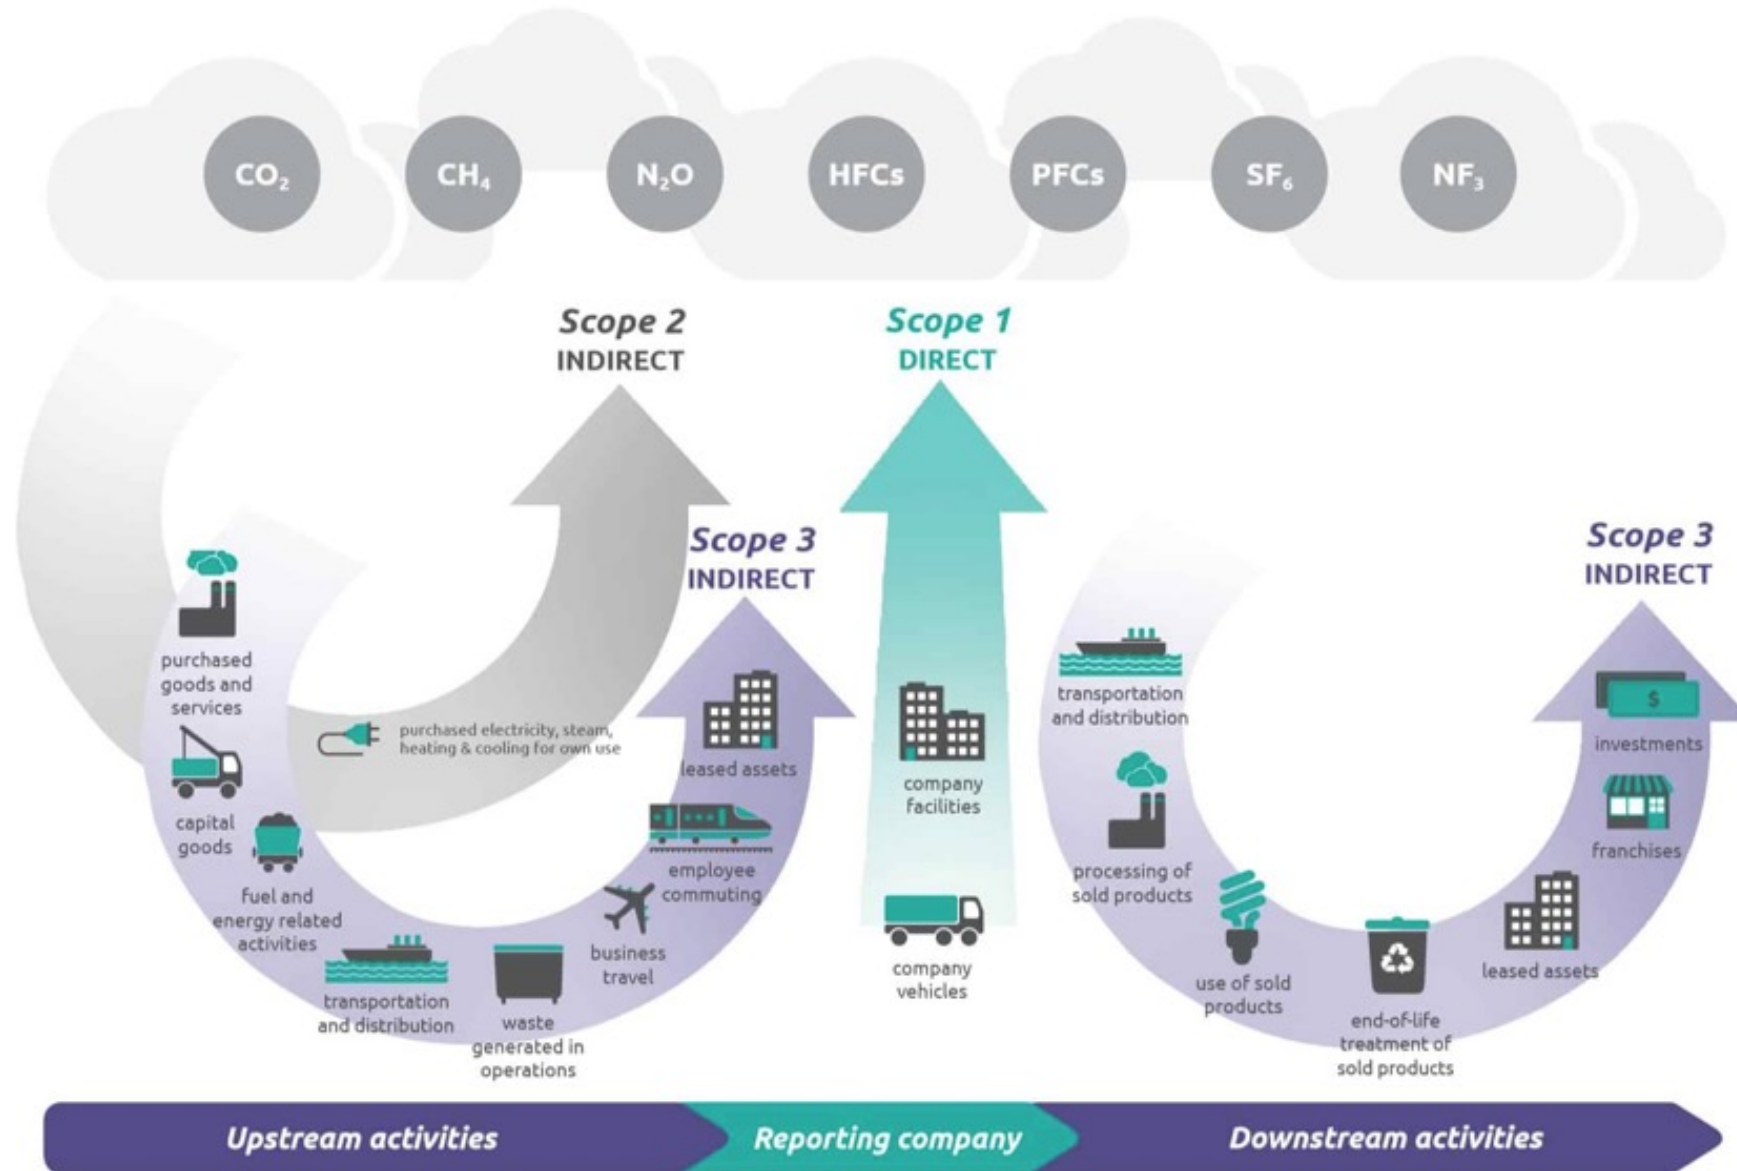

The rise of Sustainability and ESG

The ESG Framework

Complexity rises with Scope 3 – technology can only manage it

Where Software technology can help in Sustainability and the IBM mapping

IBM Consulting and
Ecosystem Partners

Sustainability Challenge

Regulatory

Rising pressure to meet environmental, social & governance (ESG) goals.

Yet invisible, high emissions in Supply Chain

Up to 80% of emissions are coming from the supply chain.

Decarbonization Targets

Record commitments by companies. But most lack a roadmap to get there

Environmental challenges

Create business risks across the enterprise.

Common way to track ESG data today

Audit
readiness?

Reliable,
trusted data?

Data health,
completeness
?

Do we start it
from scratch
next year?

Just reporting
annually or
reaching net
zero?

What are requirements to succeed establishing foundation towards Sustainability?

- Automated collection and consolidation of all Sustainability data
- Calculate GHG emissions out of the box – know-how
- Score or help in data quality and completeness
- Embedded analytics and audit readiness
- Up to date (managed) ESG disclosure frameworks and workflow capability – know how
- Decarbonization – programs; target setting & tracking
- Energy efficiency – benchmarking, alerting

Envizi helps organizations harness the power of data and analytics to achieve their sustainability goals.

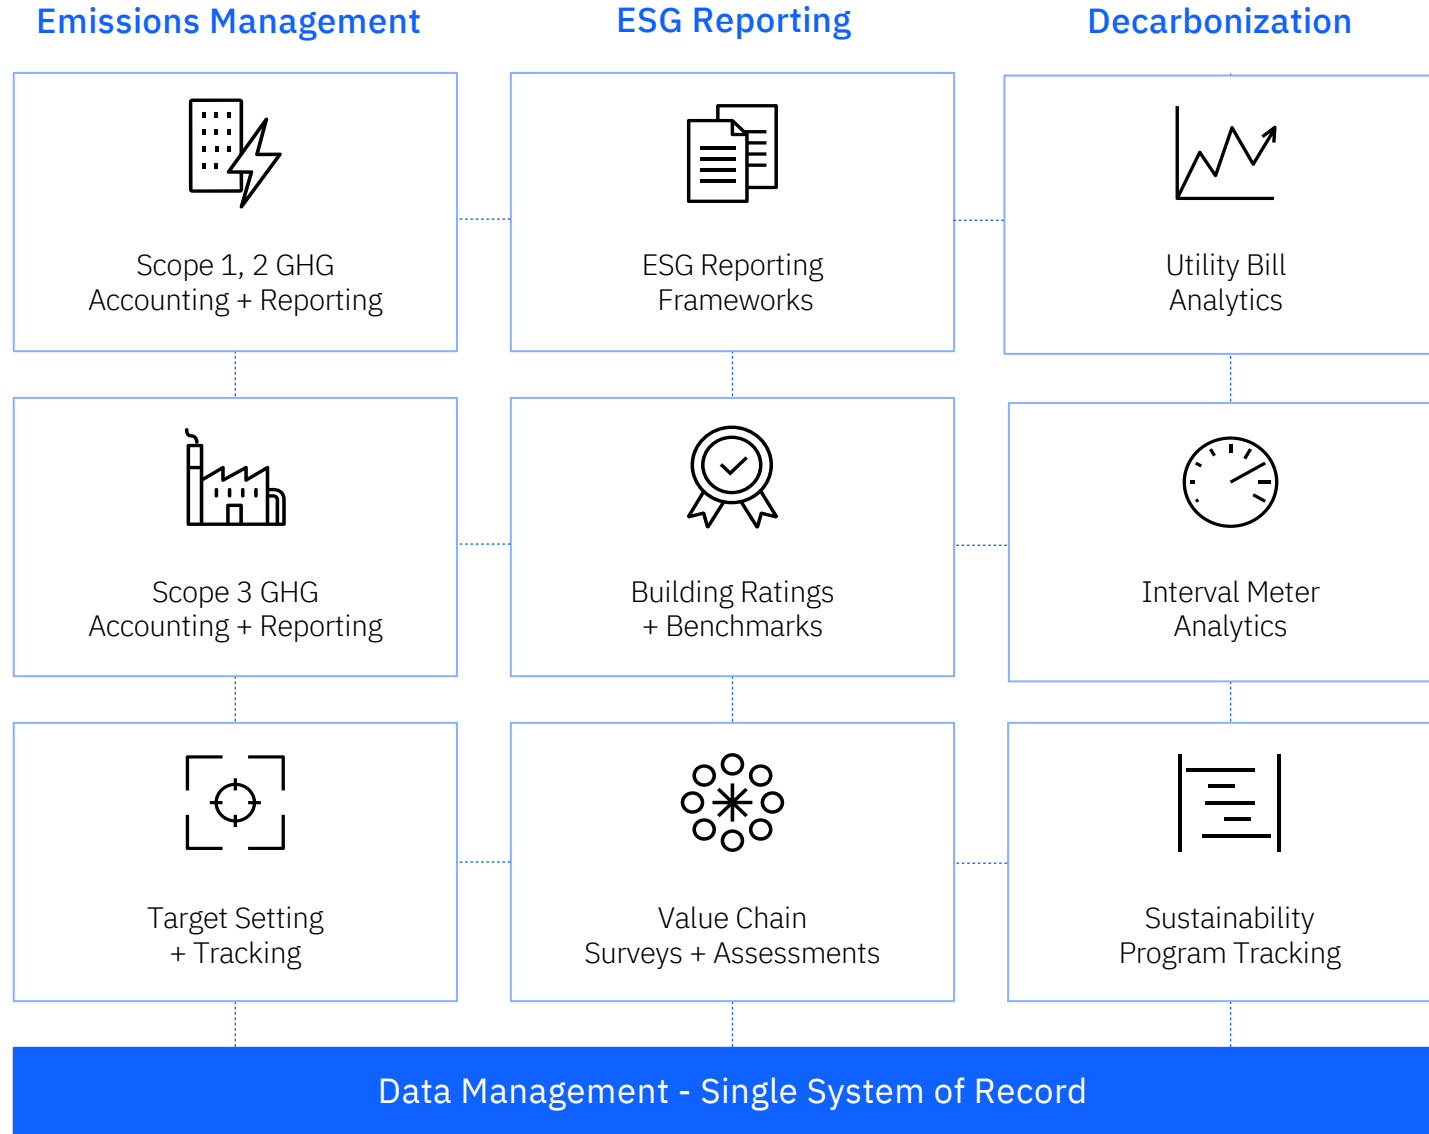

Envizi - Purpose built and out of the box

Platform

Solution

IBM Envizi – a modular and complete solution

Envizi microsite and trial

Key takeaways

Technology can help to establish a data foundation

Data foundation creates a baseline for truthful understanding of AS-IS situation

Automated capture provides no mistakes, trusted data

Fulfillment Optimization

Benefits Reporting with Carbon Emissions

What's next

Measure, monitor & report on carbon emissions produced. Streamline supply chain sustainability. Future, set levers to optimize fulfillment based on sustainability initiatives, minimizing carbon emissions, and packaging waste.

Responsible Sourcing Scoring

Monitoring Product & Supplier Sustainability Performance

What's next

- Ensure that the ingredients sourced are sustainable and certified according to industry/commodity-specific sustainability standards.
- Define responsible sourcing requirements for a Specific Product or Commodity Group
 - Product Carbon Footprint data
 - Fair-trade
 - *RSPO certified*
 - Rainforest alliance certified
 - Child-labor free

The screenshot displays the IBM Supply Chain Intelligence Suite interface. The left sidebar contains navigation options: My products, Top pages, Supply Chain Intelligence Suite, Control Tower, Dashboard, Work queues, Data explorer, Transparent Supply, Trace, Sustainability, Documents, FDA compliance, Settings, My organization, My organization users, Sustainability settings (highlighted), Configuration, My network, and Data. The main content area is titled 'Sustainability settings' and has two tabs: 'Product settings' and 'Sustainability criteria'. Under 'Product settings', there is a section for 'Product-level sustainable score calculation settings' with 7 settings. A list of settings includes: Cereal / Breakfast bars (10), Chocolate products (15), Cosmetics (85), Inbound cocoa products (36) (highlighted with a green box), Inbound palm oil products (15), Coffee / tea (25), and Cooking oil (12). A green arrow points from the 'Inbound cocoa products (36)' setting to a detailed view of its configuration. This detailed view shows the 'Setting name' as 'Inbound cocoa products', 'Last updated' as 'November 16, 2020', and 'Updated by' as 'John Smitten'. It also includes a 'Product carbon footprint' section with 'Required criteria' (Product carbon footprint shared and Product carbon footprint audited and verified, both checked) and a 'Target carbon footprint' of '1.6 CO2 kg/ ton'. Below this is a 'Sustainability attributes and score weights' table with columns for 'Criterion' and 'Weight'. The table lists: Fair Trade (Weight 5), Sustainable palm oil (Weight 7), Rainforest alliance (Weight 5), and Child labor free (Weight 5). At the bottom, there is an 'Applicable products (15)' section with categories: Cocoa products (20 products) and Cocoa bean products (16 products).

Key takeaways

Carbon emission in the distribution process

Importance of sourcing and carbon neutrality
